

Etudes et enquêtes

The National Telecommunications Regulatory Agency (ANRT) regularly conducts studies and investigations relating to the telecommunications industry. The goal is to collect reliable indicators and be able to give a image of the sector, while providing information that can be used to establish forward-looking statements.

Methodology and relevance

Studies conducted by ANRT follow a strict methodological approach as well as professional and ethical principles of transparency and impartiality. When the expertise and complexity of the subject requires it, ANRT approaches partners that specialize in providing useful data to investors and specialized bodies.
